Identification, Assessment, and Treatment Issues for Helping Clients in Relationships with Psychopathic Individuals

6-hour engaging program that delivers insights you can apply immediately

You may be treating someone who is being abused by a psychopathic individual and you don't even know it.

Psychopathy is a serious syndrome of personality pathology. While most psychopaths are charming and charismatic on the surface, underneath they are manipulative, pathological liars, and irresponsible. They fail to honor commitments and don't believe the law applies to them. With an understanding of psychopathy and its "hidden" traits and characteristics (such as psychopathic traits in one or both spouses, or even an adolescent child), psychologists and other therapists will be better equipped to handle key therapeutic issues that should be considered when treating someone who has suffered, or is suffering due to a relationship with a psychopathic individual.

ATTENDEES WILL LEAVE WITH AN UNDERSTANDING OF…

1. The traits, behaviors and characteristics exhibited by the psychopath and early misconceptions about psychopathy
2. The Three Phase manipulation process of the psychopath
3. Current research findings including prevalence, the relationship of psychopathy and violence, and genetic links
4. The symptoms and behaviors of the victims of psychopaths
5. Several issues that commonly arise when family members of psychopathic individuals present for consultation, assessment or treatment
6. Treatment approaches (early and later phases) for those who have been impacted by psychopathic individuals

RECENT ATTENDEES SAID…

Our programs have consistently received high marks for the level of knowledge and expertise of our speakers, their teaching ability and their ability to maintain audience interest.

- *Very informative; great job*
- *Excellent presentation*
- *Very useful and well-presented information*
- *Great presentation, interesting content, presented well*
